

"CHIEF" CAMPING TRAILER

OWNERS INSTRUCTION MANUAL

1 Wheel your Chief to the desired location.

2 Release and position front body legs to 7th notch. To position rear legs, release and push down to ground level. To adjust trailer body, place foot on leg base, lift up slightly on trailer corner and bring leg lock pin to a notch or two higher, leveling trailer. Remove travel cover.

3 Slide ridge telescope bow off trailer into a vertical position beside trailer. Unzip tent door. (To eliminate vacuum.)

TO RAISE TENT AT CAMPING SPOT

4 Grasp canvas and pull to raise center telescope bow to position.

5 Attach elastic hooks, on outside corner of floor, to trailer legs. Stretch floor out from trailer and stake down.

Vesely Manufacturing Co.

2101 NORTH LAPEER ROAD
LAPEER, MICHIGAN

TO RAISE TENT AT CAMPING SPOT (continued)

Be sure ridge telescope bow is in sleeve on side of tent, then extend bow till tent is straight. Stake out support ropes from top corners of ridge

Extend center telescope bow to straighten slack from roof over bed.

Snap tent to trailer below storage compartment.

TO STRIKE TENT FOR TRAVELING

Zip up all windows. Unsnap tent where attached below storage compartment.

Release lock and slide center telescope bow together. Zip door closed. Release elastic hooks from trailer legs. Pull all stakes.

Release lock and slide ridge telescope bow together and move this assembly, with tent attached, to side of trailer.

Pull hip bow down to trailer folding tent under.

Apache owners who purchased the optional canopy with an ADD-A-ROOM or SCREEN ENCLOSURE. Following instructions apply:

(ADD-A-ROOM shown)

1 Stake out counter guy rope on back of tent. Zip canopy to tent.

2 Assemble two piece center canopy pole and stake out. Then stake out the two outer canopy poles.

3 Zip out Add-A-Room and/or screen under with screen door lined up with center pole. Secure grommet tabs under poles.

4 Zip Add-A-Room and/or screen to face of tent and to eave of canopy. Stake down two corners nearest trailer. (Slide Add-A-Room floor under tent floor.)

5 TO REMOVE OPTIONAL ADD-A-ROOM AND/OR SCREEN ENCLOSURE:

(Close windows on Add-A-Room.) Pull stakes and loosen all ties. Unzip option from canopy. Straighten canvas on ground under canopy. Fold twice and roll up. Untip canopy from tent and roll up.

4 Pull center telescope bow down, once again folding tent under.

5 Fold remaining tent, with ridge telescope bow attached onto trailer.

6 Fold weather flap under bow assembly. Replace road cover.

7 Release rear body leveling legs by lifting up on body corner and holding leg lock pin away from notches. Still holding pin pull leg up and lock in place. To assist in folding front legs-tilt trailer.

"SMOKY" THE BEAR SAYS

"Make sure your fire is OUT and your campsite CLEAN so that others may enjoy the woods as you have."

A FEW SUGGESTIONS TO ASSURE YOURSELF OF CAREFREE TRIPS FOR YEARS TO COME

CANVAS

The tent portion of your unit is one of the finest materials of it's type available. 13 oz. ceilings with 11 oz. side walls Vivatex treated. With proper care it will not require any further treatment for years to come. If any areas in the tent require retreating because of a mishap, we recommend Sail-Craft spray.

Adjustments are provided on telescope bows and guy ropes to relieve excess tension during wet weather. As with all canvas shelters it is recommended that the tent be soaked several times to close seams prior to first camping trip.

BODY

Tent may be struck for daily traveling when wet but should be dried and aired thoroughly before storing.

Any gear carried on bed should be packed UNDER folded tent.

Lock door before putting trailer on the road.

Waxing will help prolong the lustre of the body and act as a buffer to road salts.

Heavy items that have few points of contact with the bottom of the box should be padded and light gear packed around to prevent sliding.

Use powdered graphite occasionally as lock lubricant.

When packing compartments try to apportion weight equally. At hitch level the tongue weight of a properly loaded trailer will be about that of a beverage case - 40 lbs.

Record key number on registration in case of loss.

RUNNING GEAR

Proper inflation will prevent overheating and prolong tire life. A pressure of 45 lbs. is recommended when trailer is empty and 60 lbs. when trailer is loaded. (400 lb. payload.)

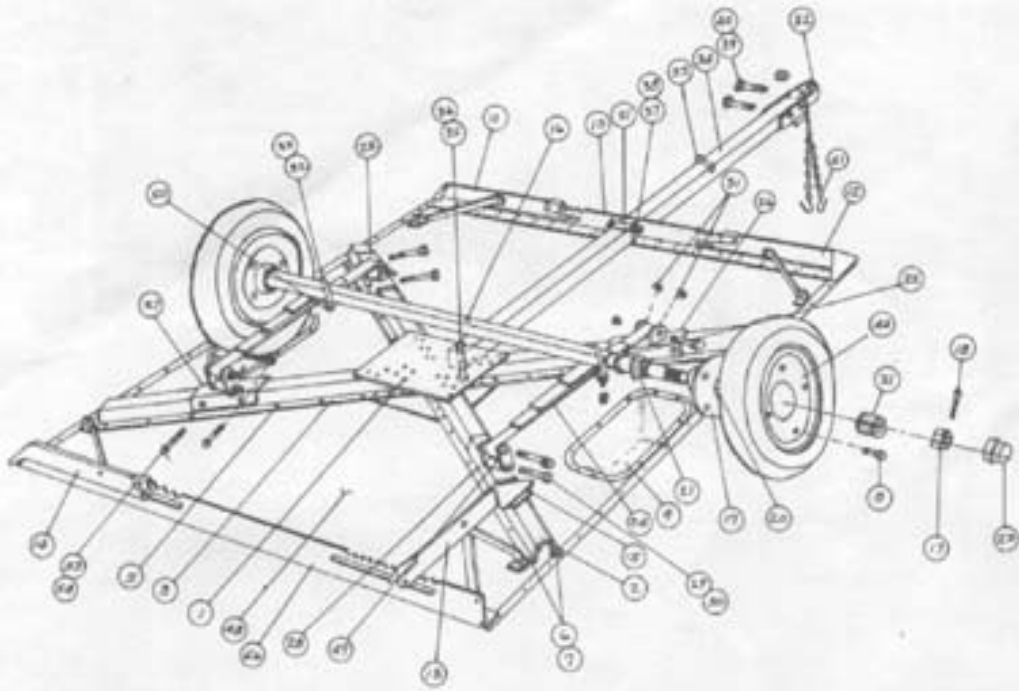

The Goodyear Tire Co. warrants your Apache tires - should adjustment be necessary take your tire to your nearest Goodyear dealer.

Repack wheel bearings every 2000 or 3000 miles. Be sure wheel spins freely after packing.

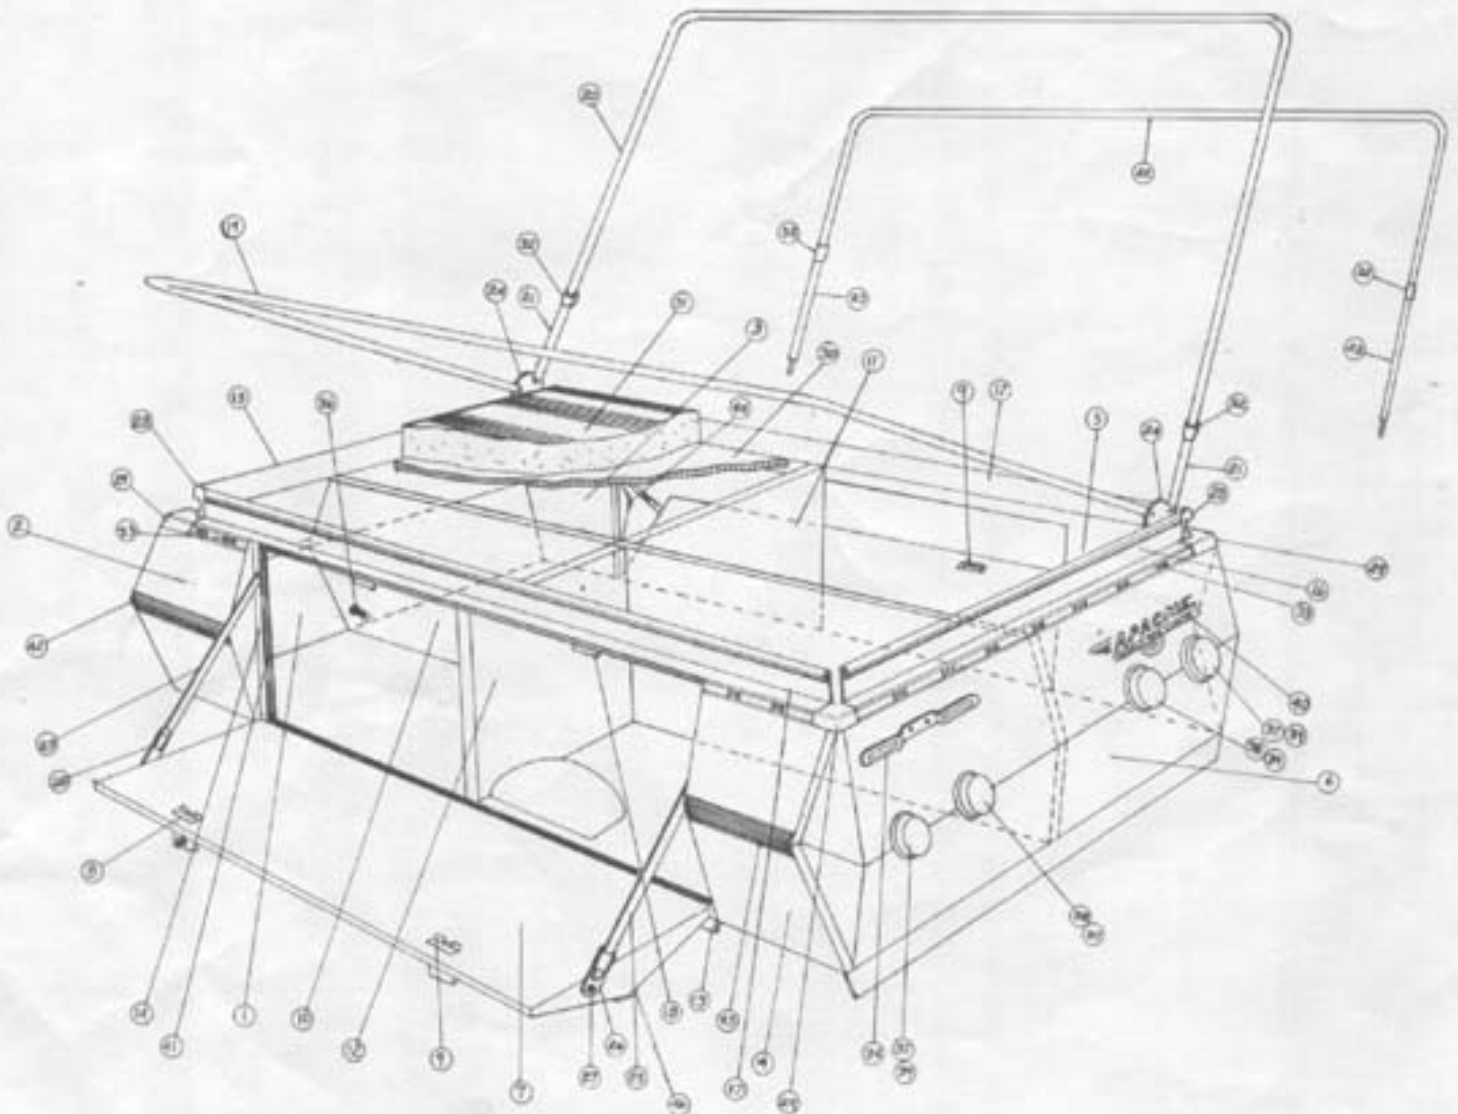

Check tongue, spring assembly, U bolts and wheel bolts before putting unit in service.

If replacement parts are needed, they may be ordered through your Apache Dealer.

Happy Apache Camping!
