The APACHE CUB... Versatility Supreme for the 80's

Our new addition to the Apache family is a unique concept in recreational vehicles. It is really three vehicles in one; a camper, a utility trailer and a boat. Remove the top, flip it over, and you have a sturdy three seat boat. Now open up the tent and enjoy the spacious camper. The basic trailer body can be used as a utility trailer by just removing the bed board and tent.

Versatile yes, but also a flexible system. You can purchase the complete system or just the component you desire.

The three seat boat is formed of high density polyethylene that is over 1/2" thick. It has a floor of 3/4" plywood that is stained and varnished. The motor mount is rated for a two h.p. outboard motor. Six and a half foot oars and oar lock sockets are included. The boat has been certified by the Boating Industry Association and meets all applicable United States Coast Guard regulations.

The roof, sidewalls and sewn in floor are made of a 50% polyester, 50% cotton blend that is treated with a water repellent and flame retardent. The large fiberglass screened windows have zippered storm flaps.

Under the 2 1/2" thick polyurethane foam mattress is a hinged door in the bed board which allows access to gear stored in the lower body. The complete bed board and mattress assembly are easily removed from the trailer body.

The lower body/utility trailer is formed of 1/2" thick high density polyethylene, creating 35 cubic feet of cargo capacity. Full leaf springs, tubular axle and 12 gauge u-channel steel frame provide a sound support for this sturdy trailer.
